

Revised October 2019

Qualifications: Members of CCHPTP are clinical health psychology doctoral, internship, and post-doctoral programs that produce clinical health psychologists capable of functioning as scientific investigators and as practitioners, consistent with the highest standards of clinical health psychology and consistent with Health Service Psychology guidelines. CCHPTP members adhere to a training model in which all trainees obtain competencies in both conducting empirical research and engaging in practice in clinical health psychology settings.

CCHPTP has two types of program membership: Choose One:

_____ **Full Membership** is offered to doctoral, internship, and postdoctoral programs that train health service psychology students with competencies in the science and practice of clinical health psychology, and provide training at the “*Major Area of Study*” or “*Emphasis*” levels of the Taxonomy (see below). Doctoral and internship programs must be accredited through APA or CPA for full membership. Program representatives from programs with Full Membership can participate in all aspects of CCHPTP governance, including running for elected office, voting for candidates for office, and voting on initiatives being considered by the organization.

_____ **Associate Membership** is offered to programs that demonstrate commitment to training health service psychology students with competencies in the science and practice of Clinical Health Psychology, and provide training at the “*Experience*” or “*Exposure*” levels of the Taxonomy (see below). Representatives of programs with Associate Membership are welcomed and encouraged to participate in discussion of initiatives being considered by CCHPTP, but cannot participate in CCHPTP governance. CCHPTP encourages Associate Member programs to apply for Full Membership status if they meet criteria over time.

Describe your model of training and explain how it assures that all trainees obtain competencies in both conducting empirical research and engaging in clinical practice in health psychology settings: (attach summary page as desired):

Program Data: Best characterization of extent of health psychology training in the program:
See attached Clinical Health Psychology Taxonomy: See full taxonomy attached below and
at: <http://www.cchptp.org/> or <http://cospp.org/specialties/clinical-health-psychology>

____ **Major Area of Study** (highest level of education and training opportunity in clinical health, includes expectations for acquisition of knowledge through didactics, practical training, direct service, and research and scholarship).

____ **Emphasis** (structured, in-depth opportunity for knowledge acquisition, practical experience, and scientific study in clinical health)

____ **Experience** (beyond acquainting a student with a specialty but allows more acquisition of clinical health psychology knowledge in clinical health)

____ **Exposure** (acquainting student with clinical health psychology in clinical health)

Additional Information Required: Please provide a letter of support from the chairperson/ head of your Department/Division/Section attesting to the fact that the clinical health training program is an integral part of the Department/Division/Section and offers support for program membership in CCHPTP.

Please save this completed form and email PDF to the Treasurer of CCHPTP along with any supporting documents requested.

**After board review and approval of the membership, and invoice will be sent the email listed on this application for dues payment and payment instructions.
CCHPTP TAX ID# is 26-1080411.**

Revised October 2019

¹ Clinical Health Psychology (CHP) and Health Psychology(HP) Courses and Training -- Must have content congruent with *Clinical Health Psychology Education and Training and Guidelines and Post-doc excerpts-CRSPP 2011* (available on Council of Specialties in Professional Psychology website <http://cospp.org/guidelines>). Doctoral programs may be on quarter or semester academic calendars and a course in either system is considered equivalent. 2 semesters/3 quarters constitute one academic year.

² Clinical Health Psychology Practicum (CHP) -- one academic year (approx. 9 months) of supervised training, at least 8 hours per week, or its equivalent (e.g., total clock hours 240 hours) with at least 50% of clinical service delivery with *health-related issues* of patient, family members, and/or *interprofessional* care teams.

³ Clinical Health Psychology dissertation or research project-- empirical research, extended case studies, literature critiques and analyses, or capstone projects.

⁴ Clinical Health supervised practice-- must include >50% of clinical service delivery to clinical health psychology patients, family members, and/or interprofessional care teams (e.g., assessment, treatment, consultation). The remainder of supervised experience can include seminar attendance, readings, research, provision of clinical supervision, teaching, program development and evaluation, and administration.

⁵ (Not applicable) – By definition, postdoctoral education and training in clinical health psychology is a major area of study requiring 80% or more of time spent in this specialty area, but does allow for an exposure to other specialty areas.

⁶ The term “*focus*” should be used to describe opportunities in non-specialty areas of training. Training programs should strive to provide explicit explanations of the type of training provided in these non-specialty areas.

⁷ Supervised practice is expected with either the CE or CHP course(s) and defined as >50% of clinical service delivery to clinical health psychology patients, family members, and/or interprofessional care teams (e.g., assessment, treatment, consultation)

* CE course = must be organized CE program APA sponsor of psychology continuing education.

Examples to illustrate use of taxonomy in program description:

Doctoral program

In our APA accredited doctoral program at Our University we offer a Major Area of Study in Clinical Health Psychology with at least two didactic courses and two supervised clinical practica in that Major Area of Study which includes a dissertation or research project within Clinical Health Psychology. We offer students an Exposure to Clinical Neuropsychology with one course in that area and an Experience in Clinical Child Psychology with two courses and two semesters of supervised practicum in that area. We offer a Focus in cardiac psychology as part of our advanced practicum wherein an advanced assessment course and two additional practica semesters are available on the cardiac care unit.

Internship program

Our internship program is accredited in professional psychology by the APA-Commission on Accreditation and offers a Major Area of Study in Clinical Health Psychology at Our Health Science Center. At least 50% of trainee time will be devoted to training in our health psychology programs with direct patient assessment and treatment activities and consultation services. There is an optional Experience in Clinical Neuropsychology at our Clinic. This Experience would involve up to 25% of supervised time working with neurology patients. Our internship also offers a focus on psychooncology service provision and an Experience in family oriented treatment of medically ill patients and their families.

Postdoctoral program

The Clinical Health Psychology Postdoctoral Program at Our Health Science Center is accredited by APA-Commission on Accreditation. At least 80% of the postdoctoral residents time will be clinical health psychology supervised practice. Residents will have >50% of clinical service delivery time devoted to clinical health psychology patients, family members, and/or interprofessional care teams (e.g., assessment, treatment, consultation). Our program provides depth and focus with major rotations focusing in integrated primary care, psychooncology, or obesity. Minor rotations include the clinical health psychology consultation/liaison service and the pain rehabilitation service. Our program requires research and 2 research products (i.e., peer-reviewed publication and paper/poster presentation at national/international meeting) by the completion of the two-year postdoctoral program. Residents have opportunity for optional Exposure in Clinical Neuropsychology with up to 10% of time of supervised practice in the Neuropsychology Clinic.

Post Licensure Program

Our Health Service Psychology Training Institute is an APA approved sponsor of psychology continuing education. Our course, Clinical Health Psychology in Primary and Tertiary Health Care, provides 50 hours of CE and 480 hours of supervised practice following the course. Supervision is provided on a monthly basis via Skype with an experienced clinical health psychologist mentor. This program is consistent with Emphasis level training in clinical health psychology as described in the Clinical Health Psychology Specialty Taxonomy
